

MicroStrategy Intelligence Server Tuning & Advanced Administration

Overview:

This two-day course is designed to provide students with advanced knowledge of MicroStrategy Intelligence Server tuning and administration. Participants will leave with an understanding of how to better tune and administer their MicroStrategy implementation. Topics include MicroStrategy product placement considerations, accessing multiple data sources from a single MicroStrategy project, creating users with different levels of administrative privileges, and using various troubleshooting tools, such as the Diagnostics and Performance Configuration tool. Students will also learn how to prevent memory depletion on Intelligence Server and discuss Intelligence Server clustering concepts. The course concludes with a lesson on MicroStrategy license management. Lectures will be reinforced with hands-on exercises and interactive class discussions.

Cost:

- £990 per person, or 2 LUs
(1LU = £495)

Number of Days:

- 2 days

Who Should Attend:

- Administrators
- Infrastructure Leads
- Consultants
- Project Technical Lead
- Anyone who has an interest in administration, security, troubleshooting, and tuning to best support a MicroStrategy reporting environment.

Prerequisites:

- MicroStrategy Desktop: Reporting Essentials course
- MicroStrategy Intelligence Server Administration course

Topics:

Day One:

- Implementation Practices
- Working with Multiple Data Sources
- Managing Security
- Troubleshooting

Day Two:

- Memory Tuning
- Clustering Considerations
- License Management
